

Developer Scope of Work – Jivanjor Website Platform

1. Project Setup

- Frontend: Setup Next.js project, TypeScript, Tailwind CSS, environment variables, reusable component structure.
- Backend: Setup Node.js project, Express/NestJS framework, REST API structure, MySQL connection, ORM (Prisma/Sequelize).

2. Database Design

- Users: id, name, email, password, role, created_at
- Products: id, name, slug, description, category_id, material_id, metadata
- Product Categories: id, name, slug, parent_category, description
- Materials: id, material_name, description
- Use Cases: id, title, slug, description
- Issues: id, issue_title, slug, problem, solution
- Blog Posts: id, title, slug, content, category, tags, author, publish_date
- SEO Metadata: id, page_type, page_id, meta_title, meta_description, canonical_url

3. API Development

- Authentication APIs (login, token auth, roles)
- Product CRUD APIs
- Category CRUD APIs
- Material CRUD APIs
- Use Case CRUD APIs
- Issue Page CRUD APIs
- Blog CRUD APIs with filtering
- SEO metadata APIs

4. Admin Panel Development

- Dashboard overview
- Product management
- Category management
- Material management
- Blog management with editor
- Use case management
- Issue page management
- SEO metadata management

5. Frontend Development

- Home page
- Product listing page

- Product detail page
- Category landing page
- Material pages
- Use case pages
- Issue pages
- Blog listing & blog detail
- About page
- Contact page

6. Component Development

- Header
- Footer
- Navigation menu
- Product cards
- Blog cards
- FAQ sections
- CTA sections
- Forms
- Breadcrumbs
- Pagination

7. SEO Implementation

- Server Side Rendering (SSR)
- Dynamic meta tags
- Sitemap generation
- Robots.txt
- Canonical URLs
- Structured data schema

8. Performance Optimization

- Image optimization
- Lazy loading
- Code splitting
- CDN integration
- Caching

9. Security

- API authentication
- Rate limiting
- Input validation
- XSS protection
- HTTPS enforcement

10. Deployment

- AWS EC2 setup
- Node server configuration
- MySQL (AWS RDS)
- Nginx configuration
- Domain & SSL setup
- CDN integration (Cloudflare/CloudFront)

11. Testing

- API testing
- Frontend functional testing
- Responsive testing
- Browser compatibility testing
- SEO validation

12. Go Live Support

- Production deployment
- Monitoring setup
- Bug fixing
- Performance tuning

Deliverables

- Production website
- Admin CMS dashboard
- Source code repository
- Deployment documentation
- API documentation
